

HOCKEY

SAND DRESSED HOCKEY SURFACE FOR ULTIMATE BALL CONTROL

GREENFIELDS TX SD

Key benefits:

- ✔ Excellent foot grip due to tight tuft bind
- ✔ Stable sand dressed surface
- ✔ Total control for technique development
- ✔ High durability from TX monofilament fibre

GreenFields TX SD has been developed as an optimum surface for players to enhance their technical skills, providing a stable pitch for total control.

The advanced monofilament fibre technology gives an improved tuft bind for long lasting performance. Combine this with elite air texturised fibres to create a high bulk; the result is a smooth field with equal ball roll in all directions.

GreenFields TX SD is partially filled with sand ensuring that the pile height remains vertical. Irrigation is an option for faster play and increased comfort and safety, yet isn't a continuous requirement so water usage can be controlled. In a dry state, it is possible for other sports to be played on the pitch. Ideal for amateur clubs who wish to improve their performance as well as for professional training fields.

“

We wanted to choose the best pitches we could for our students and have already had some good feedback from teams that have played on the surface.

”

JAMES ELLISON

Director of Estates
Liverpool Hope University
